

Reveal MultiColor labels are a versatile solution for printing labels with multiple colors using a single direct thermal printer. This product is unique in its ability to provide a multi-color direct thermal imaging solution, allowing you to create labels on demand with deep, eye-catching colors anywhere on the label.

With **Reveal MultiColor**, you can print labels with shades of green, blue and black, giving you the flexibility to design labels that stand out and meet your specific needs. Whether you require multi-color labels for product packaging, shipping, or any other application, **Reveal MultiColor** labels have got you covered.

Easy to use: With a minor software upgrade, **Reveal MultiColor** labels can be **imaged in multiple colors** using many standard direct thermal printers, eliminating the need for any ink, toner or ribbons. Simply load **Reveal MultiColor** labels and go - the software does the rest.

High durability: These labels are designed to be resistant to water, chemicals, and other environmental factors, ensuring that your labels remain intact and readable throughout their lifespan.

Versatile applications: **Reveal MultiColor** products can be used in various industries and applications, ranging from retail and healthcare to logistics and manufacturing.

Cost-effective: With **Reveal MultiColor**, you can image vibrant, multi-color labels without the need for expensive color label printers or ink cartridges. This helps you save money while improving the versatility of your labels. Use the same label format for multiple applications –

FACE STOCK:

Reveal MultiColor is a patented thermal imaging technology that works in traditional thermal printers. By varying the energy of the printhead, **Reveal MultiColor** facestock produces crisp, bold images in shades of green, blue and black anywhere on the label! All with the added benefit of non-yellowing, non-fading properties.

Caliper (mils) Single Ply	3.5 (Mils)
